Professional Summary

Automation & DevOps Engineer with 2.5+ years of experience at HCLTech designing and deploying Ansible and Terraform solutions for infrastructure provisioning, configuration management, and application deployment. Proven ability to eliminate manual effort through scalable automation across Linux, Windows, VMware, NetApp storage, and cloud platforms (AWS, Azure). Track record of delivering measurable cost savings and operational efficiency improvements.

Technical Skills

Automation & IaC: Ansible, Ansible Tower, Terraform
Cloud & Virtualization: AWS, Azure, VMware ESXi, VirtualBox
Languages & Scripting: Python, Bash, PowerShell, YAML, JSON
DevOps & Containers: Git, GitHub Actions, Docker, Kubernetes
Enterprise Tools: NetApp Storage, ServiceNow (SNOW), Linux, Windows, PuTTY, VS Code

Experience

HCLTech

Oct 2023 – Present

Analyst – Automation & DevOps

Noida, India

- Delivered 12 end-to-end automation solutions across storage, security, ITSM, and VMware domains using Ansible and Terraform, saving \$55K+ annually and eliminating 4,500+ hours of manual effort per year.
- Developed and maintained 20+ Ansible playbooks and PowerShell scripts aligned with SOPs across Windows, Linux/Unix, VMware, Backup, and NetApp Storage environments.
- Awarded **Automation of the Quarter (OND'24)** for delivering a high-impact E2E automation, and **Certificate of Appreciation (JFM'25)** for independently completing 5 E2E automations in a single quarter.

Projects

Automated Storage Aggregate Utilization

- Designed and implemented end-to-end storage automation using Ansible, Python, Bash, and NetApp REST APIs to monitor aggregate utilization and trigger automated corrective actions.
- Automatically reduced aggregate utilization to below 82% when thresholds exceeded 85%, improving capacity planning and storage reliability across production environments.
- Saved 3,000+ manual effort hours annually and delivered \$30K+ in yearly cost savings by eliminating repetitive monitoring and remediation tasks.

PIR Change Task Auto-Closure

- Built an Ansible automation pipeline using ServiceNow (SNOW) modules to validate pre-defined closure conditions for PIR (Problem in Review) change tasks and automatically close qualifying tickets.
- Implemented full workflow automation including condition validation, SNOW API-based ticket closure, Excel report generation, and automated team email notifications.
- Automated closure of 15–20 PIR tasks daily, cutting per-task processing time from 20–25 minutes to 2–4 minutes and saving 50+ person-hours per week.

ESXi and VM Hardening Automation

- Developed an Ansible automation framework to enforce security hardening across VMware ESXi hosts and virtual machines, configuring VM-level parameters (`copy.disable`, `remoteDisplay.maxConnections`) and ESXi-level parameters (`Security.ComplexPasswordEnabled`, `Syslog.global.logDir`, `Syslog.global.logDirUnique`) using Ansible VMware modules.
- Automated compliance report generation post-hardening, summarizing updated parameters and enforcement status, with reports automatically emailed to the team.
- Reduced hardening time per VM or ESXi host from approximately 1 hour to under 5 minutes, enabling consistent and audit-ready security enforcement at scale.

Education

JSS Academy of Technical Education

B.Tech – Electronics and Communication Engineering

2019 – 2023

Noida, India

Certifications & Awards

- AWS Certified Solutions Architect – Associate
- Microsoft Azure Fundamentals (AZ-900)
- Automation of the Quarter – OND'24, HCLTech
- Certificate of Appreciation – JFM'25, HCLTech
- Silver Jewel Award – HCLTech
